Patent No. 6743769

GENERAL INFORMATION:
APPLICANT: Yeaman, Michael R.
TITLE OF INVENTION: Antimicrobial Peptides and Derived
TITLE OF INVENTION: Metapeptides
FILE REFERENCE: 66742-025 (HR5614)
CURRENT APPLICATION NUMBER: US/09/525,269A

CURRENT APPLICATION NUMBER: US 09/025,319

PRIOR PILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT: Yearnam, Michael R.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 25854, Application US/09248796A

Sequence 25854, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
FALL MEDILAMTION:
FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION:
FILE PEPERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

FRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

PRIOR FILING DATE: 1998-08-13

SEQ ID NO 25854
                                                    APPLICANT: Darveau, Richard P.
APPLICANT: Darveau, Richard P.
APPLICANT: Blake, James J.
APPLICANT: Blake, James J.
APPLICANT: Cosand, Wesley L.
APPLICANT: Cosand, Wesley L.
APPLICANT: WINTER COSAND AND METHODS FOR TREATING
TITLE OF INVENTION: INFECTIONS CAUSED BY ORGANISM SENSITIVE TO BETA-LACTAM
TITLE OF INVENTION: ANTIBIOTICS
ANTIMER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Brietol-Myers Squibb Company, Patent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 95, Application US/09119263

Patent No. 6054431

GENERAL INFORMATION:
APPLICANT: Horwitz, Arnold H.
APPLICANT: Little, Roger G.
TITLE OF INVENTION: Materials
NUMBER OF SEQUENCES: 237
CORRESPONDENCE ADDRESS:
                                       NAMEKEY: misc feature

OTHER INFORMATION: "XMP.101"

FEATURE:
NAMEKEY: Modified-site

LOCATION: C-Terminus

OTHER INFORMATION: /label= Amidation

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
